Define the Problem Statements

Date	28 october 2026	**Team ID**	TEAM-FUEL-08
Project Name	Global Fuel Price & Taxation Trends	**Maximum Marks**	2 Marks

Customer Problem Statement Framework: A well-articulated customer problem statement allows the analytics team to focus on solving high-impact challenges in energy pricing, policy disparities, and global transportation economic friction.

Problem Statement 1 (PS-1): Policy Analyst & Energy Researcher	
I am Customer / Persona	A Global Energy Policy Analyst and Economic Researcher studying international macroeconomic energy trends.
I'm trying to Target Outcome	Analyze and benchmark national tax percentages against crude oil market fluctuations across high, middle, and low-income countries.
but Barriers / Friction	Fuel pricing models and tax structures vary drastically across geographic regions (e.g., European high-tax regimes vs. low-income subsidized rates like Rwanda vs. Germany).
because Root Cause	Disparate data sources fail to correlate Brent Crude benchmarks directly with domestic tax percentages and income-level averages in a unified interactive view.
which makes me feel Emotional Impact	Frustrated and overwhelmed when attempting to perform cross-country tax policy evaluations and report on global taxation parity.

Problem Statement 2 (PS-2): Logistics Manager & Fleet Fleet Strategist	
I am Customer / Persona	An International Freight & Supply Chain Logistics Manager managing cross-border commercial transport fleets.
I'm trying to Target Outcome	Optimize operational route fuel budgets by comparing Petrol vs. Diesel price margins and regional tax differentials.
but Barriers / Friction	Unpredictable price volatility and extreme regional variance in USD/Liter cost lead to substantial budget overruns on transport corridors.
because Root Cause	Lack of real-time multi-country comparison visual tools that group price trends by income bracket and Brent crude correlation.
which makes me feel Emotional Impact	Anxious and uncertain when forecasting long-term operational costs and presenting transport budgets to executive leadership.
